# **Powerful Technology that Helps Secure the Safety & Property of Association Residents.**

**Silent Protect Residential is a powerful security technology built on the same platform as Shield Group's Silent Protect law enforcement technology and was designed and built-in coordination with major law enforcement agencies.**

**It gives Association residents world-class security technology that enables them to alert Association security 24/7 and provide security with the information they need to come to their aid quickly and effectively – protecting both resident's safety and property.**

# **Instant, GEO-Tagged, Silent Alert, Communication and Information to Association Security.**

**Silent Protect provides a direct, silent, two-way communications link between residents and their Association security provider--- providing security personnel with a wealth of vital information about the resident's threat or concern.**

**The silent alert feature enables the resident to silently alert security when calling and speaking could accelerate an already threatening situation.**

# Touch One Button and Association Security Knows Exactly Where Help is Needed

When the Silent Protect Residential security panic button is pressed, the precise GPS location of the resident is transmitted to Association security.

Indoors or outside, 24 hours-a-day anywhere in the community, residents under threat or needing help are instantly linked with security.

The GPS location of the resident stops transmitting after the threat is over and does not ever activate unless the panic button is pushed.

# Association Security Can Silently Listen to What is Happening When They Cannot Safely Talk

When the panic button is pushed, activation of the mobile device's microphone is triggered. This allows Association security to hear what is happening while they are in route to the resident.

The smartphone's speaker, however, is not activated as Association security listens. By doing this Association security can better prepare while in route to the resident. Any 3<sup>rd</sup> party who is posing a threat remains unaware that help is on the way and that a communication line is open to Association security.

## Panic Button Transmits User's GPS Location

Press the Silent Protect Residential security panic button from anywhere in the community and your exact GPS location is sent to Association security. GPS locations are never activated unless the panic button is pressed.

## When It's Isn't Safe to Talk.

**Because speaking out loud about a threat isn't always safe, pushing the panic button activates the smart phone microphone. This allows Association security to hear what is happening while they are in route to the resident.**

**The speaker is not activated so the person who is posing the threat never knows that security is either on the way or can hear what is happening.**
